

JANUARD ESGUERRA

AI-Augmented Software Engineer

Contact Number: 09610123193

Email Address: esguerrajanuardddd@gmail.com

Portfolio: esguerrajanuard.github.io/portfolio

Address: Brgy. Bulaon, City of San Fernando, Pampanga

Nationality: Filipino

Period: Can join IMMEDIATELY

PROFESSIONAL SUMMARY

AI-Native Software Engineer specializing in rapid prototyping and modern system architecture, with a proven ability to orchestrate Large Language Models (LLMs) to ship production-grade applications at accelerated speeds. By strategically leveraging AI for boilerplate generation and syntax execution, I effectively bypass traditional coding bottlenecks to focus on high-level system design, seamless API integrations, advanced prompt engineering, and complex architectural debugging. Passionate about maximizing developer productivity, I excel at translating complex business requirements into scalable solutions where speed, innovation, and reliability are critical.

CORE CAPABILITIES

- **AI & Engineering Workflows:** Prompt Engineering, AI Pair Programming (Antigravity, ChatGPT Plus, Gemini Pro, Claude), Rapid Prototyping, System Architecture, API Integration, Complex Debugging.
- **Full-Stack Technologies:** React, Next.js, FastAPI, Python, TypeScript/JavaScript.
- **Database & Infrastructure:** PostgreSQL, Supabase, Redis, Tailwind CSS, Git CI/CD.

ENGINEERING EXPERIENCE

Lead Architect & Developer | PAMSU Web-Based Python IDE

Full-Stack Educational Developer Platform

- **Asynchronous Backend:** Orchestrated an async API utilizing FastAPI and PostgreSQL for the secure isolation of untrusted student code execution.
- **Advanced Evaluation:** Directed the architectural implementation of a custom Abstract Syntax Tree (AST) engine to programmatically verify structural programming constraints prior to runtime.
- **Background Processing:** Designed a scalable pipeline utilizing Celery and Redis as a message broker to offload heavy computational workloads, including bulk grading and Jaccard similarity reviews.

Full-Stack Integration Lead | RFinest Water Refilling Management System

Production-Deployed Commercial Application

- **Scalable Architecture:** Architected a decoupled client-server model leveraging Next.js Server-Side Rendering (SSR) and Supabase to automate daily business operations and order fulfillment.
- **Database Integrity:** Designed robust relational database structures with strict data integrity enforced via Row Level Security (RLS) and custom PL/pgSQL database triggers.
- **Secure Access:** Implemented comprehensive Role-Based Access Control (RBAC) to securely isolate administrative operations and dashboards from customer-facing interfaces.

CERTIFICATIONS & CREDENTIALS

- AI Ready ASEAN – ASEAN Foundation & Google.org (April 2026)
- Python Intermediate – Sololearn (March 2026)
- Python Essentials 2 – Cisco Networking Academy (December 2025)
- Python Essentials 1 – Cisco Networking Academy (November 2025)

EDUCATION

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

Pampanga State University, Philippines | 2023 - Present

- **Academic Foundation:** Leveraged theoretical coursework in Systems Analysis & Design, Software Engineering, and Database Management to guide high-level architectural decision-making and effectively orchestrate AI development tools.
